#### 工作原理 Working Principle

物料流经单向阀后，在高压腔泵里加压，通过微米级的喷嘴，以亚音速撞击在乳化腔上，同时通过强烈的空穴剪切效应，得到足够小而均一的粒径分布。

The material flow through a one way valve, was pressured in the high pressure chamber. when pass the micron nozzle, the material will subsonic impact the chamber, with a shearing effect at the same time, then get a narrow range of micron particle.

## 验证 Verification

诺泽科技有专业的验证团队，负责制药用水设备、配液工艺系统、洁净管道系统及高压气体的验证工作。

验证生命周期从制定 URS 为起点，经过设计确认、建造阶段、安装确认、运行确认、最终通过性能确认来证实 URS 是否完成。

验证会生成配套的书面证据，在满足各项相关法规的前提下，保证客户达到预期的质量特性。

Nooze Technology has a specialized verification service team established to verify pharmaceutical water equipment, solution preparation process system, clean piping system, and high-pressure gas.

The life cycle of verification starts from the formulation of URS; after design qualification, construction, installation qualification and transportation qualification, the performance qualification is performed to check whether URS is completed.

The verification generates supporting documentary evidence to ensure that the customer achieves the desired quality characteristics, subject to compliance with the relevant regulations
